

Amigos Hospital

Abstract:

The Employee Details Form is used to save information about a new and existing employee, including their personal and contact information, as well as their employment history, qualifications, and previous experience. The purpose of the form is to create a comprehensive profile of the employee that can be used to manage their employment and help them integrate into their new role. The form typically includes fields for Id, number, Designation, Specialization, Date of Join, Salary, Previous Experience. This form can have access for admin to enter new employee details and for manager has access for both read and edit.

Team-members:

- Sneha
- Shivani

- Nikhil
- Chandra Sekhar
- Dinesh
- Harish

Business Requirements:

- We have to create login page for hospital using Html and enter Admin/Manager Details(Username and Password)
- We have to create the Employee forms page in Html, Css, Js and we have to give the employee details ID, number, Designation, Specialization, Date Of Join, Salary,

Previous Experience.

- We have to create a Medical Inventory form page using Html, Css, Js and enter inventory.
- We have to create the project using Django(web framework)
- We have to create the Database by MySQL
- We have to link the Html page & Django application
- We have to give login access to Admin and Manager

Conclusion:

The login page with employee form and employee details is an essential tool for hospital to manage their employees. It allows the admin to easily add new employees to the system and the manager can access and view the details of existing employees. This documentation has provided an overview of the login page Employee Details .These features are available on the employee form and Medical inventory.
